

Article Overview

The price of a 200mm cable tray typically ranges from \$10 to \$50 per meter, depending on material, type, and finish.

Price Range by Material

- o Galvanized Steel: Common and durable, generally priced between \$10-\$30 per meter for standard ladder or perforated trays, offering good corrosion resistance and strength for industrial applications .
- o Aluminum: Lightweight and rust-proof, costing around \$20-\$50 per meter, suitable for installations where weight reduction is important .
- o PVC or Plastic: Budget-friendly, often below \$10-\$20 per meter, ideal for light-duty or chemical-resistant environments, but not suitable for heavy loads .
- o Powder-Coated or Stainless Steel: Higher-end options with enhanced corrosion resistance, typically at the upper end of the price spectrum, sometimes exceeding \$50 per meter .

Factors Affecting Price

- o Tray Type: Ladder, mesh, perforated, or enclosed designs influence cost; ladder trays are more expensive but support heavier cables .
- o Length and Height: Standard lengths are 2-3 meters; larger or custom sizes increase cost .
- o Coating and Finish: Hot-dip galvanizing, powder coating, or stainless steel finishes improve durability but add to the price .
- o Bulk Orders: Purchasing in larger quantities can reduce per-meter cost significantly .

Example Pricing

- o A 200mm x 60mm galvanized steel tray, 2 meters long is available with a material thickness of 0.9mm, suitable for standard installations .
- o PVC 200mm trays or aluminum trays of similar dimensions are priced higher due to material properties and durability . When selecting a 200-type cable tray, consider not only the current cable load but also future expansion, environmental conditions, and installation requirements to ensure cost-effectiveness and long-term reliability .

Available in various sizes and finishes, steel cable trays are designed to withstand heavy loads and harsh environments. Explore the
