

Fiber optic cable is sharp and easy to handle

Preview

The acronym stands for "bend insensitive multimode fiber. " This is a term for specific fiber optic cables that are designed to handle sharper bends during the cable run. Both types come in a coil or on a reel and are typically installed in the same areas with similar tools and techniques. Yet the materials differ greatly. As such, to ensure that fiber optic cables or FORJs can yield the best possible results of the FO performance it's of great significance for. Fiber optic cable and copper twisted-pair cable share many similarities.
