

How are electrical cable trays opened

Preview

A ventilated tray has openings in the bottom of the tray, allowing some air circulation around the cables, water drainage, and allowing some dust to fall through the tray. Small cables may exit the tray through the ventilation openings, which may be either. Cable trays are used as an alternative to open wiring or electrical conduit systems, and are commonly used for cable management in commercial and industrial construction. It is used in a range of applications with sp nch runs from the main cable tray system to electrcal devices or other equipment.
