GlobalConnect, a digital infrastructure and data communication provider, has begun laying a new submarine fiber-optic cable across the Kattegat to improve digital connectivity between Sweden and Denmark, and add redundancy to Nordic data routes. It is expected to go live in 2027. Eastern Light is currently operating, building and planning a series of fiber-optic cable routes in the Nordics, with the purpose of meeting the fast-growing demand for modern and effective long-haul dark fiber in the region. The project includes the new SF-II connection, with a total investment of approximately EUR 30 million., which was founded last year, launched its High-Capacity Data Backbone project for Northern Europe. IOEMA is a state-of-the-art, high-capacity, 1400 km repeatered submarine fibre optic project that will arc across five key. Icelandic network operator Farice has unveiled plans to build a new high-capacity subsea fibre optic cable, named AUDUR, connecting southern Iceland to Scotland.
