Active Optical Cables sit right in the middle. They combine the lightweight nature of fiber optics with the plug-and-play convenience of DAC. AOCs are widely used for rack-to-rack links and AI/HPC clusters, where distances are too long for DAC but too short to justify expensive. An Active Optical Cable is an advanced cabling assembly that integrates fiber optic technology with active electronic components to enable high-speed data transmission over distances that would be impractical or impossible with traditional copper cables. The cables can consist entirely of optical fibres, but there are also hybrid cables in which only part of the. An AOC cable is a type of interconnect that uses optical fiber media inside the cable, but the transceivers (optical-electrical conversion) are integrated into its ends. Hence, active.
