This PoE extender can extend the connection between your PoE switch and a 60 W Axis device supporting IEEE 802. It offers flexible installation, and it can be placed in areas where plenum rating is required. Since most users power this device via PoE, no power adapter is included in the package. PoE technology offers a number of benefits: a. it eliminates the need for installing. The UDS family of external device servers enables users to connect, manage and control just about any piece of equipment with a serial port from virtually anywhere over Ethernet or the Internet. For a board-level version of this product, see the UDS1100-B. Device networking is what powers M2M. Up to 30W per PoE port for powering PoE-enabled devices. Hardware DIP switch for "Standard" and "Extend" mode selection; the "Extend" mode features 30-watt PoE transmission distance of 200 meters at speed of 10Mbps. Port-based. OmniConverter PoE Media Converters and Enterprise PoE Switches provide network distance extension over fiber optic cabling to PoE Powered Devices (PDs).

Cisco network switches deliver performance, flexibility, and security. Cisco switches are scalable and cost-efficient and meet the demands of hybrid work.

If no power is needed as the connection is going to supply data only, ensure that a PoE-enabled switch of at least a 802.3af class 2 compatible port (providing up to 6) or the POWER-60W external power

With the UDS1100, virtually any piece of equipment can be added to an Ethernet network in a matter of minutes! This single-port external device server is a quick,
