Brand-new modular switches featuring an innovative backplane-free Clos architecture, offering a variety of card options to support enterprises in transitioning to 400GE. 173/1548 Tbit/s switching capacity, supporting smooth evolution to 400 GE in anticipation of future traffic. CloudEngine 16800-X series switches are Huawei's first DC core switches built for diversified computing power. They adopt the lossless Ethernet technology to enable data center storage networks to be built over Ethernet, thereby unifying technologies and O&M for computing and storage networks. The CloudEngine 16800 supports Border Gateway Protocol - Ethernet VPN (BGP-EVPN), which can run as the VXLAN control plane to simplify VXLAN deployment.

The Huawei CloudEngine 16800 is a high-performance data center switch designed for the AI era, featuring an innovative iLossless

The power consumption of a CloudEngine 16800 series switch is the total power consumption of the chassis (including fan modules)

Product Overview Huawei CloudEngine 16800 is the data center switch built for the AI era. It has an embedded AI chip and uses

CloudEngine S12700H series switches are Huawei's next-generation modular core/aggregation switches designed for high-end

Switches in an M-LAG system all work in active state to share traffic and back up each other, enhancing system reliability. Switches

Explore the Huawei CE16800-X8-AH switch, fanless and PSU-free, designed for enterprise data centers. Buy now, get pricing, and

The switches use an industry-leading Clos architecture and a strict front-to-back airflow design to provide
