

Price List of Primary Distribution Box Configuration

Article Overview

The price of a primary distribution box typically ranges from \$50 for basic residential units to several thousand dollars for advanced commercial or industrial configurations, depending on capacity, features, and customization.

Typical Price Ranges

- o Basic residential distribution boxes: \$50-\$200, suitable for small homes with limited circuits and standard safety features like MCBs and RCDs .
- o Commercial or industrial units: \$300-\$1,500, often including higher rated current, multiple outgoing circuits, modular designs, and enhanced protection devices .
- o Precision or smart distribution cabinets: \$2,000-\$10,000+, designed for data centers, telecom hubs, or medical facilities, with features like branch circuit monitoring, touchscreen interfaces, communication modules, and redundant power architecture .

Factors Affecting Price

- o Rated Current and Circuit Count: Higher amperage and more outgoing circuits increase cost .
- o Protective Devices: Inclusion of MCBs, RCDs, RCBOs, surge protection, and arc fault detection adds to the price .
- o Enclosure Material and IP Rating: Steel or weatherproof enclosures with higher IP ratings are more expensive than basic plastic boxes .
- o Monitoring and Smart Features: Cabinets with branch monitoring, remote communication, or energy management systems cost more .
- o Customization and OEM Options: Custom layouts, busbar modifications, and branding can significantly affect pricing .
- o Installation and Compliance: Professional installation and adherence to standards like IEC 61439, UL, or local codes may add to the overall cost .

Practical Considerations

- o Future Expansion: Modular designs allow adding circuits without replacing the entire box, which can justify higher initial investment .
- o Safety and Reliability: Investing in quality protective devices and certified enclosures reduces risk of electrical faults and downtime .
- o Project Type: Residential, commercial, industrial, or specialized applications (like solar PV or data centers) require different configurations, influencing both price and component selection . In summary, the price of a primary distribution box configuration varies widely based on capacity, protective features, monitoring
