

Price of ladder-type cable tray baffle

Article Overview

Ladder-type cable tray baffles typically cost between \$20 and \$50 per unit, depending on material, size, and manufacturer.

Pricing Overview

Ladder-type cable trays, including baffles, are commonly made from hot-dip galvanized steel, aluminum, or stainless steel, with prices varying by material and dimensions . Standard ladder trays are usually 2.4 meters (8 feet) in length, and baffles are sold as individual units or per piece . The cost of a baffle is generally less than the full tray section, but it depends on the manufacturer and the specific design.

Factors Affecting Price

- o Material: Aluminum trays are lightweight and corrosion-resistant, often slightly more expensive than galvanized steel . Stainless steel options are the most durable and costly.
- o Size and Height: Wider or taller trays require larger baffles, increasing the price .
- o Finish and Coating: Hot-dip galvanization adds durability and affects cost .
- o Supplier and Brand: Prices vary between suppliers like Grainger, McMaster-Carr, and Legrand, with some offering bulk discounts or system kits .

Example Price Ranges

- o Hot-dip galvanized steel baffle: Approximately \$20-\$35 per piece for standard 2.4-meter trays .
- o Aluminum baffle: Around \$30-\$50 per piece, depending on width and load capacity .
- o Stainless steel baffle: Can exceed \$50 per piece for heavy-duty or specialized applications .

Additional Considerations

When budgeting, include fittings, splices, and supports, as these accessories are required to complete a cable tray system and can add to the total cost . Ordering from suppliers with real-time availability ensures that the baffles and trays are reserved and delivered promptly . By considering material, size, and supplier, you can select ladder-type cable tray baffles that meet both budget and performance requirements.
