

Selection of French Huijue Optical Cable Distribution Box

Article Overview

Huijue optical cable distribution boxes offer versatile core counts, durable materials, and multiple installation options suitable for FTTH, FTTB, and PON networks.

Key Considerations for Selection

1. Core Count and Capacity Huijue distribution boxes are available in 8-core, 12-core, and up to 48-core configurations, allowing you to match the box to your network size and future expansion needs . For FTTH or PON deployments, it is recommended to reserve 20-30% extra capacity to accommodate future growth without immediate replacement . 2. Material and Durability

- o Metal boxes (e.g., HJ-GF-KJW-12A) provide robust protection and are suitable for outdoor or high-traffic areas .

- o SMC (Sheet Molding Compound) offers high UV resistance and mechanical durability, ideal for industrial or outdoor environments .

- o ABS or ABS+PC is lightweight and cost-effective, suitable for indoor applications with limited environmental exposure .

3. Installation Methods Huijue boxes support wall-mounted, pole-mounted, and overhead installations, providing flexibility for residential corridors, building-integrated wiring, or metropolitan broadband networks .

4. Functionality These boxes typically include splice trays, adapters, and cable routing components to manage fiber connections efficiently. The welding and separation structure in metal boxes allows both splicing and wiring, ensuring signal integrity and simplified maintenance .

5. Environmental Protection Check the IP (Ingress Protection) rating to ensure the box can withstand environmental conditions. Outdoor boxes should have higher IP ratings to protect against dust, moisture, and UV exposure .

6. Customization and OEM Options Huijue offers customized solutions, including OEM/ODM services, allowing you to tailor the box to specific network requirements or branding .

Recommendation

For a French deployment, consider the following:

- o Outdoor urban areas: 12-core or higher metal or SMC boxes with high IP rating.

- o Indoor residential corridors: 8-core or 12-core ABS+PC boxes for cost efficiency.

- o Future scalability: Always select a box with extra ports to accommodate network growth. By evaluating core count, material, installation method, and environmental protection, you can select a Huijue optical cable distribution box that ensures reliable performance, easy maintenance, and long-term network scalability.
