

Sequence of Subsystems in Integrated Wiring Cabinet

Preview

The Integrated Wiring System can be divided into seven subsystems, namely the workspace subsystem, the wiring (horizontal) subsystem, the trunk (vertical) subsystem, the inter-device subsystem, the management subsystem, the building group subsystem, and the optical cable. The Integrated Wiring System can be divided into seven subsystems, namely the workspace subsystem, the wiring (horizontal) subsystem, the trunk (vertical) subsystem, the inter-device subsystem, the management subsystem, the building group subsystem, and the optical cable. We all know that there are seven systems in integrated wiring, so what are the functions and functions of these seven systems? Where is it distributed? In this issue, we have been explaining in detail. Inter-management. We are aware that there are seven systems in integrated wiring. Workspace Subsystem: This. Based on his own understanding, the author drew the following schematic diagram, showing the schematic effect of each subsystem in detail. It uses twisted-pair or optical cables to transmit information within. Integrated Wiring System (Premises Distribution System) is a full name "Building and Building Group Integrated Wiring System". According to EIA / TIA 568 standard, the building integrated wiring system consists of six independent subsystems: * work Symmers (user terminal): Connected by the terminal. Integrated cabling system is a cabling system specially designed to meet the needs of development. Like the nerves in the body for modern architecture, it uses a range of high-quality standard materials to combine voice, data, images and partial control signal systems with a unified transmission.

This marshalling cabinet function is to interface the incoming field cable (which is normally a
