

UPS power system cannot detect battery

Preview

This can be caused by a drained battery, faulty power connections, or an internal hardware fault. How to Fix It: Ensure the UPS is plugged into a functional power outlet. Test the outlet with another device to confirm. A "battery not detected" error doesn't automatically signify the end of your UPS. That could clear up any short-term errors or glitches preventing it from detecting the battery. You could try updating the UPS firmware (if you can get hold of the latest version) but my experience is that this continues to happen even with the latest firmware installed.

UPS can't detect external battery packs Dear all, Please help with the current issue. I have UPS SRT5XLI and 2 external battery packs SRT192XLBP connected. Battery packs were sent
