

Viewing optical module information on Huawei ME60

Preview

Run the following command to view detailed optical module information on the device interface: `display transceiver interface <interface-type> <interface-number> verbose` The command output is divided into two parts: Run the following command to view detailed optical module information on the device interface: `display transceiver interface <interface-type> <interface-number> verbose` The command output is divided into two parts: An eSFP module is an SFP module that supports monitoring of voltage, temperature, bias current, transmit optical power, and receive optical power. Because all the SFP optical modules support these monitoring functions, eSFP is also called SFP. The inventory information such as serial number, product code, optical module, device, power, voltage, temperature, fan, CPU and memory are very important on operation and troubleshooting purposes. Your email. Manuals and User Guides for Huawei ME60 Series. We have 3 Huawei ME60 Series manuals available for free PDF download: Hardware Description, Emergency Maintenance Huawei ME60 Series Pdf User Manuals. Users are distributed in different campuses and access BRASs.

View the optical module information on Huawei switches and H3C switches through the command

Basic Router Information Check Guide This document describes how to check basic information about routers. In the case of unknown faults, you can quickly determine whether a router

The display diagnostic-information command is a level-3 (management level) command. After a device fault occurs, deliver the diagnostic information file to the agent or Huawei for fast fault

Call Huawei global service hotline or contact software maintenance engineers to verify the software version. If allowed, reboot the device or power off and restart the device. Services on the device are

Troubleshooting Optical Module Issues Symptom An optical port cannot go Up. The optical module cannot be properly identified and optical module information cannot be obtained. After

Run the display transceiver [interface interface-type interface-number | slot slot-id] , to view the information on the optical module interface. Run display transceiver diagnosis interface [interface
