The primary distribution box refers to the main distribution box, typically located in the distribution room. Selecting the right type determines whether a facility runs without interruption or chases electrical faults through disorganized. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. It is a vital part and central hub of any electrical system.
