

What is the status of fiber optic communication in Hungary

Preview

Key Insight: Hungary has made significant progress in expanding fiber optic infrastructure, with coverage reaching 85% in 2026. This widespread access has facilitated faster internet speeds and enhanced digital services across urban and rural areas. Hungary's National Digitalisation Strategy 2022-2030 aims to provide 95% of households with gigabit networks, to increase digital skills of the population, to support digitalisation of business processes, and to increase the use of e-government services by 2030. Thanks to the latest developments, the ultra-modern fibre-optic internet will reach 800,000 more households and businesses across the country, announced Karoly Balazs Solymar, State Secretary for Infocommunications. Telecommunications infrastructure service provider of the 4iG Group performed successfully in the second phase of Gigabit Hungary Programme (DIMOP_Plusz-3. Optical network development can be started in additional Hungarian regions, where coverage is not sufficient enough. Gigabit Hungary. Fixed broadband download speeds are among the strongest in Central Europe, fibre-to-the-home networks are widely deployed, and 4G mobile coverage extends to virtually every corner of the country.
